

Co-Formula Products for Electronics Industry

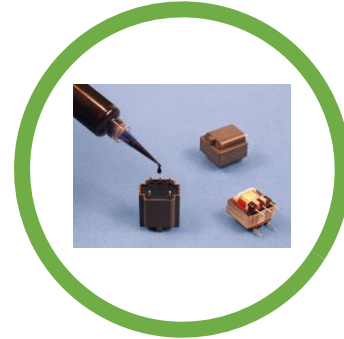

Value-added Solutions with Better Performance

E-glass Fabric

Amino and Epoxy Silanes can be used as coupling agents, to improve the peel strength of the epoxy/glass and epoxy/copper interfaces.

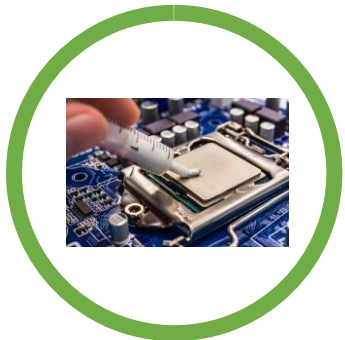

Optional Products:
CFS-302/CFS-243/CFS-766/CFS-838/CFS-850/CFS-921

Encapsulation Adhesive

Silanes with different functional groups can modify fillers and improve interfacial properties as well as thermal stability of encapsulation materials.

Optional Products:
CFS-838/CFS-850/CFS-921/CFS-302/CFS-212

Thermal Grease

Silanes modified fillers, such as ceramic powder are used in silicone grease to meet thermal needs and also greatly lower its viscosity.

Optional Products:
CFS-850/CFS-302/CFS-838

Li-ion Battery

LiBOB and upgraded LiFOB are used as salt, while functional silanes used as electrolyte solvents for Li-ion batteries.

Optional Products:
CFE-293(LiBOB)/CFE-165(LiFOB)/CFS-534
